5. FIRE FIGHTING MEASURES

5.1 FLAMMABLE PROPERTIES

Flash Point - Closed Cup: *No test data available.*

Flash Point - Open Cup: *No test data available.*

Autoignition Temperature: 400 °C 752 °F , ASTM

Flammable Limits In Air:

Lower *No test data available.*

Upper *No test data available.*

5.2 EXTINGUISHING MEDIA

Apply water spray (fog), alcohol-type or all-purpose-type foams by manufacturer's recommended techniques for large fires. Use CO₂ or dry chemical media for small fires.

5.3 EXTINGUISHING MEDIA TO AVOID

No information currently available.

5.4 SPECIAL FIRE FIGHTING PROCEDURES

Do not direct a solid stream of water or foam into burning molten material; this may cause spattering and spread the fire.

5.5 SPECIAL PROTECTIVE EQUIPMENT FOR FIREFIGHTERS

Use self-contained breathing apparatus and protective clothing.

5.6 UNUSUAL FIRE AND EXPLOSION HAZARDS

Avoid dispersion of dust in the air to reduce potential for dust ignition/rapid burning. Dust is easily ignited; avoid ignition sources. In the presence of flammable gases, liquids, or vapors,

handle in inert nitrogen-blanketed equipment. Refer to National Fire Protection Association Document NFPA 69 for descriptions of explosion prevention systems. Static ignition hazard can result from handling and use. Electrically bond and ground all containers, personnel and equipment before transfer or use of material. Special precautions may be necessary to dissipate static electricity for non-conductive containers. Use proper bonding and grounding during product transfer as described in National Fire Protection Association Document NFPA 77.

For CELLOSIZE HEC products in Flexible Intermediate Bulk Containers or plastic containers with a capacity greater than 226.8 kg (500 lb), a static ignition hazard can result from handling and use. Non-conductive containers cannot be grounded. For transfers between Flexible Intermediate Bulk Containers and another non-conductive container, special precautions may be necessary to dissipate static electricity. For conductive components (containers, personnel, equipment) use proper bonding and grounding during product transfer as described in National Fire Protection Association Document NFPA 77. Refer to National Fire Protection Association Document NFPA 69 for descriptions of explosion prevention systems.

5.7 HAZARDOUS COMBUSTION PRODUCTS

Combustion may produce the following products: Carbon monoxide and/or carbon dioxide. Carbon monoxide is highly toxic if inhaled; carbon dioxide in sufficient concentrations can act as an asphyxiant.

6. ACCIDENTAL RELEASE MEASURES

Steps to be Taken if Material is Released or Spilled:

FOR SPILL: Cover with absorbent, sweep up, collect and dispose immediately. Will absorb moisture and become slippery. Observe government regulations.

Personal Precautions: Wear suitable protective equipment. See Section 8.2 - Personal Protection.

7. HANDLING AND STORAGE

7.1 HANDLING

General Handling

Electrically bond and ground all containers, personnel and equipment before transfer or use of material.

In the Exposure Limits Chart above, if there is no specific qualifier (i.e., Aerosol) listed in the Form Column for a particular limit, the listed limit includes all airborne forms of the substance that can be inhaled.

A "Yes" in the Skin Column indicates a potential significant contribution to overall exposure by the cutaneous (skin) route, including mucous membranes and the eyes, either by contact with vapors or by direct skin contact with the substance. A "Blank" in the Skin Column indicates that exposure by the cutaneous (skin) route is not a potential significant contributor to overall exposure.
