

WILDLAND First Responder Kit

Great protection, comfort and breathability!

Sundstrom's comfortable half mask respirator lets you work longer with less effort and better protection, and at less cost. One WILDLAND First Responder Kit includes everything you need.

Better Protection

Sundstrom's P100 filter eliminates 99.997% of all type of particles. NIOSH only requires 99.97% efficiency. That means our P100 filter is 10 X more effective, providing 10 X better protection. The high efficient P100 together with pre filter and spark arrester protects against all types of particles, sparks, and ash particulates.

Greater Comfort and Less Breathing Resistance

Our flexible Silicone mask fits great. Sundstrom's unique design significantly cuts inhalation and exhalation resistance making the mask twice as easy to breathe through. This increases comfort and lengthens use time.

250% More Air Flow

Our half mask respirator and P100 filter allows breathing rates of more than 250 liters per minute as compared to most competitive products which generally allow only 95 lpm. This means the Sundstrom user can handle much heavier work loads.

Far Less Cost Over Time

The SR 100 is an easy to maintain, clean and disinfect reusable mask. Our distinct pre-filter system together with spark arrester prevents premature clogging of the particulate filter and protects the P100 against sparks and ash particulates. It extends the P100 filter life up to 5 times longer than competitive products

Your safety kit contains:

Silicone respirator

P100 particulate filter

Pre-filter

Pre-filter holder

User seal check disk

Spark arrester

ID label

Storage box

Main features:

- Non-allergenic, FDA approved Silicone respirator.
- A superior face seal means a very high protection factor.
- Easily adjustable V-shaped elastic head harness with a large crown plate.
- Unique inhalation and double exhalation valve design provides one-half the breathing resistance of competitive respirators. This means easier breathing and greater respirator compliance.
- Extra large 201 square inch P100 filter area provides extremely low breathing resistance, high air flow and extended filter life.
- High-efficiency P100 particulate filter offers ten times more filter effectiveness than required by NIOSH. Each filter tested for 99.997% filter efficiency.
- Pre-filter system collects coarse particles thereby extending the life of the P100 filter.
- Spark arrester protects the P100 and pre-filter against sparks and ash particulates.
- Mask can be used with or without supplied chemical cartridge.
- NIOSH approved.
- Easily fit tested and fit checked.
