CRUZ-ALL

STOCK NO. 59795

A quality angle gauge for point sample cruising.

With CRUZ-ALL you may cruise timber using any of the following English basal area factors, 5, 10, 20, or 40.

How to use your CRUZ-ALL:

Holding the button at the end of the chain in your teeth, extend the CRUZ-ALL angle gauge away from your eye until the chain is taut. Keeping your eye directly over the sampling point, look through the CRUZ-ALL at every tree around you. Count the trees which appear as wide or wider, at breast height, than the opening for the basal area factor you are using.

For example:

"Count" this tree in a 5 BAF sample. Do not "count" this tree in a 10, 20, or 40 BAF sample

"Count" this tree in a 40 BAF Sample
