The Mosquito Patch, has offices in Baton Rouge, Louisiana & Houston, Texas. The Mosquito Patch was founded for the purpose of protecting people from preventable health risks while enjoying a healthy outdoor lifestyle. We sought partnerships with other individuals and organizations to collaborate on healthy, natural solutions. One repellent product we believe essential to every athlete, spectator and sportsman is The Mosquito Patch!

THE MOSQUITO. One growing health concern globally is the increasing numbers of mosquito and blood borne diseases carried by biting insects to humans and animals. For such small creatures, these insects are causing tremendous health risks. To most people, the blood-thirsty mosquitoes are a brief annoyance, to others, they are a deadly infectious source of blood borne parasites causing life altering consequences. Allergic reactions are only one of the milder consequences of mosquito bites.

The Mosquito Patch, an easy, all natural and effective alternative to chemical bug repellants. The Mosquito Patch formula creates reliable bug repellent and is safe for all ages and skin types. The Mosquito Patch is gentle on your skin and the environment. Research, development and technology will continue to allow The Mosquito Patch to provide a safe, effective and easy solution to help protect our family health. The Mosquito Patch is manufactured and sold in the USA. The Mosquito Patch is pending export approval in seven other countries .

How The Mosquito Patch Works

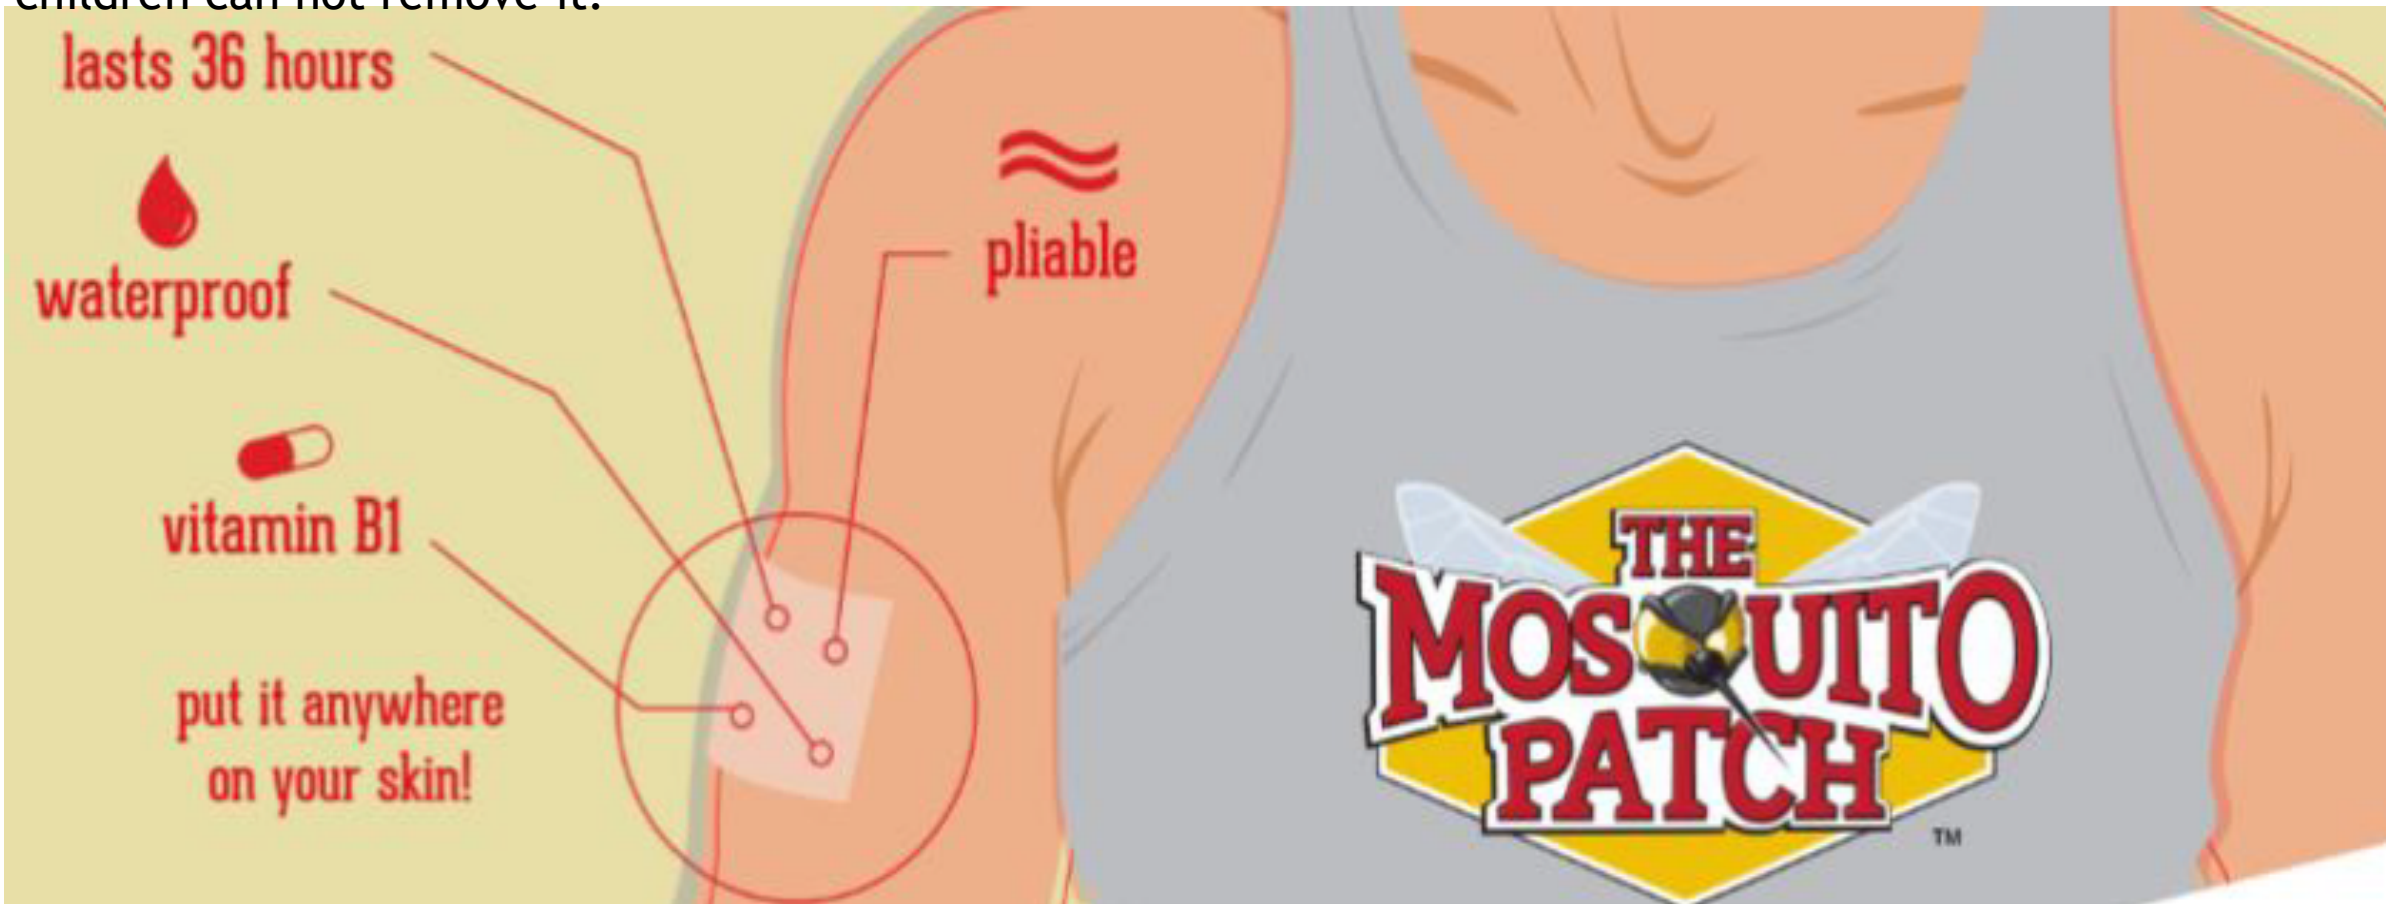

Apply The Mosquito Patch to clean, dry skin. The patch has no odor and no oily residue. The patch is coated with 75mg of vitamin B1 and will immediately begin absorbing into skin and circulatory system when applied. The B1 will remain in the blood stream even after the patch is removed. This delivery method allows for 100% protection and won't interfere with the application of makeup, sunscreens, tanning lotions and odor-eliminators used for hunting. This patch is safe for all adults and children over the age of 1 year.

Amazingly, The Mosquito Patch works as well for repelling Ticks, Fleas, Chiggers, Horse Flies, Black Flies, Biting Midges, No See Ums, Bed Bugs and all kinds of biting bugs.

- ❖ Remove from re-sealable package and paper backing
- ❖ Apply to clean, dry, hairless area of skin 2 hours before going outdoors
- ❖ 75mg of B1 will immediately begin absorbing into skin and circulatory system
- ❖ Steady stream of B1 released through perspiration of the skin pores
- ❖ DEET free, no messy sprays and no harmful chemicals to breathe or smell
- ❖ There are no adverse health affects and prevents the bites before they occur
- ❖ Remove and reapply another patch after 36+ hours to keep bug bite free.

The Mosquito Patch Delivers

The Mosquito Patch is manufactured in a clean room environment and sealed in a sanitary package. Each package contains 2 transdermal patches. The patches are waterproof, light and comfortable to wear. Simply apply and enjoy the protection for the next 36 hours. Adults should use 2 patches as most adults are deficient in B1. If using for children under 80 lbs, apply only one patch and place in an area where small children can not remove it.

Field Tested. Mother Approved!

The Mosquito Patch is the perfect natural insect repellent for every occasion:

- ❖ Outdoor Recreation & Sports Events
- ❖ Family Reunions & School Field Trips
- ❖ Home Construction & Renovation Projects
- ❖ Hunting, Fishing & Camping
- ❖ Beach Vacations
- ❖ Weddings & Reunions

All events are a welcome sights for the Mosquitos, ticks and other biting insects!!!!

Millions of children and adults are bitten by mosquitoes every day without realizing the life changing effects until they are ill.

Mosquito-Borne Diseases: Malaria, Chikungunya, Dengue, Yellow fever, 3 strains of Encephalitis and over 1.5 million cases of West Nile. The CDC estimates this is an under reported number. 4/19/2016 on NBC News: The CDC announced that the Zika virus may be 'scarier than we initially thought. Nearly 300 million people in the Americas live in areas where the mosquitoes that spread Zika thrive, and more than 5 million babies a year are born to women living in these areas.

A safe, natural product consisting 75mg of B1 Vitamin delivered in a patch for personal protection against all forms of biting insects!. This is our current packaging but will change the Image entirely on the next product run.

- ❖ Safe for Children & Adults
- ❖ Natural, DEET-Free
- ❖ No Odor or Oily Residue
- ❖ Fast, Easy and Portable
- ❖ No Re-application Necessary
- ❖ 36 Hours of Protection
- ❖ Transdermal Delivery

▶ SECTION VIII - HEALTH HAZARD DATA

- ▶ Eye Contact: No adverse health effects expected
- ▶ Skin Contact: No adverse health effects expected
- ▶ Inhalation: No adverse health effects expected
- ▶ If Swallowed: No adverse health effects expected

Testimonials

The Mosquito Patch is a great invention especially when you hate the idea of putting chemicals on your skin that will peel paint or worse putting it on your children. The bugs in north eastern Saskatchewan are big enough they bypass sucking blood and just eat red meat. If the patch will work here it will work anywhere.

Hanz Meyer Mountain Creek Outfitters Carrot River, SK

Subject: the insect reducing annoyance (The Mosquito Patch)

Last night I was really getting bugged with those guys so I decided to try one of the patches, they really work. Casey Childre, Foley Al

Thanks Tommy for the introduction to The Mosquito Patch. I also enjoyed our golf game together at Las Colinas. I was amazed as we watched the other teams spraying and swatting most of the day and no one on our team had any bites. You could definitely see the mosquitos on the course after all the rain in the Dallas area. I will be getting 50 packages for an outdoor wedding coming up in Charleston this summer. Let's play again soon. C Lang, Houston, TX.

As a father of four children living in Florida we spend a lot of time outdoors, and a lot of time and money trying to find products that keep mosquitoes away. Last summer my dad introduced us to Mosquito Patch. This product was simply a patch that kept the mosquitos off the ten kids and seven adults that where camping in the woods. This was the first weekend we did not have to "tolerate" the mosquitos. In my experience this patch works better for us than any spray, rub, or oil we have ever used. Thank you Mosquito Patch. George Milton, FL.

Hi Tom, got the patches and shared a few with friends. We are always on the water and where we live is on a large canal with a big marsh and trees across from us. When the wind dies down, the mosquitos sound like small planes, but we are able to sit and work around the yard. Send some to a friend in Giana in South America, they are about 80% Rain Forest. She said the mosquitoes there are the size of jack rabbits and they are the favorite target and primary source of food for the horse flies. She wants to import the Mosquito Patch to her country. We officially have our first purchase order. T. Bell Gold Coast Luxury Cruises Runaway Bay, QLD 4216

To Whom It May Concern: My name is Jason Reynolds and I am the owner of Fetch and Fish Promotions. I train Labrador Retrievers for shed and duck hunting. I am an avid outdoors man. I currently shed hunt frequently and I am in the outdoors for days at a time. I am constantly exposed to insects and I always come home covered in ticks. I was introduced to the Mosquito Patch a few weeks ago. Prior to using it I was apprehensive on whether it would work. After coming home several days in row with ticks stuck all over me, I decided to give the Mosquito Patch a run for its money. I used it for two days and came home without a single tick stuck on me. I had ticks crawling on me, but none of them were stuck on me. I am still in the early testing stage of the product, but as of now it has been a huge success. The product does exactly what it is supposed to do. Sincerely, Jason Reynolds
