

TREESQUEEZE™

THE ADJUSTABLE CHOKING LANYARD SYSTEM

Meets ANSI Z133 standards

TreeSqueeze™ 7+L08T18+J

The Buckingham TreeSqueeze™, created in conjunction with the experts at ArborMaster, is used for fall restraint work positioning. It meets ANSI Z133 by keeping you secure while climbing on spurs. In the event of a gaff out, the TreeSqueeze™ has a choking lanyard system that keeps you from falling down the tree.

The TreeSqueeze™ is made from the same 7/16" uniline used on our popular Buck

RigidLine, except we doubled the rope for extra rigidity, cut resistance and surface area. This protects against cuts from chainsaws and provides the user with a smoother ascent.

Another feature is the ring prusik, which provides users with a quick and easy adjustment for different diameter trees. It also provides a secure tie-in point when a natural tie in point doesn't exist. The

ring prusik is key for easy descent and self-rescue and doubles as a friction saver. Retrieval of the TreeSqueeze™ from the ground is the same as retrieving our popular Friction Savers.

The TreeSqueeze™ is available in different lengths and is adjustable to give you a perfect fit no matter what size tree you work on
